

#### **PAVEMENTS/MATERIALS CONFERENCE** "Current Challenges/Sustainable Solutions"

# Pavement Preservation Challenges in the City of Phoenix, Arizona

Jenny L. Grote, PE, PTOE Deputy Director Street Transportation Department Street Maintenance Division

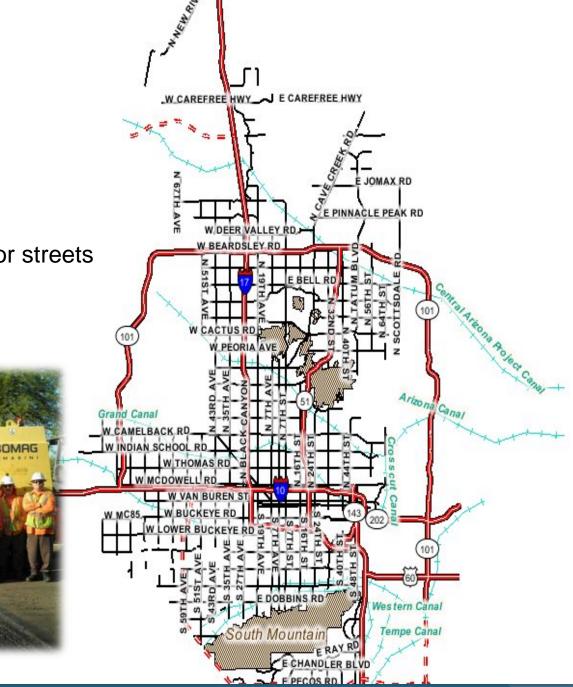

Ira A. Fulton Schools of Engineering 2014 Annual Conference November 19-20, 2014

#### **CITY OF PHOENIX**

Population: 1.5 million Area: 520 square miles 5,400 total miles of streets 1,300 miles of major & collector streets 4,100 miles of local streets

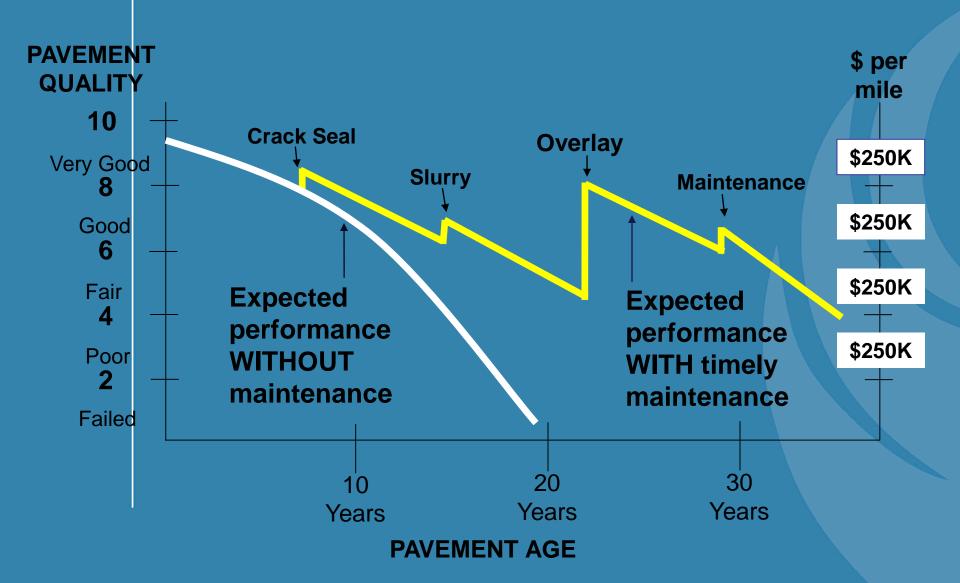

# **Pavement Preservation Practices**

ONLY LEFT LAN

- Past
- Present
- Future

- Limited data collection
- High level of subjectivity
- Lack of flexibility in programming
- Lack of commitment to use results
- Results were difficult to work with and reproduce
- Black box software

### **Effects on Preservation and programming**

- Driven by citizen complaints
- Equal revenue distribution
  O Council districts
- Staff recommendations
  - High maintenance areas

# Transition from Past to Present Pavement Preservation Practices

### Year 2008

Phoenix contracts with FUGRO Roadware and Deighton to provide pavement management consulting services

- Data collection
- Analysis
- Recommendations
- Multi-year planning

#### PROCESS

- Pavement Inventory 
   *Automated Data Collection and*
- Condition Assessment > Distress Evaluation

- Repair and Rehabilitation Strategies
- Budget Considerations

Analysis and Optimization

- Work Program
- Implementation

Analysis and Optimization

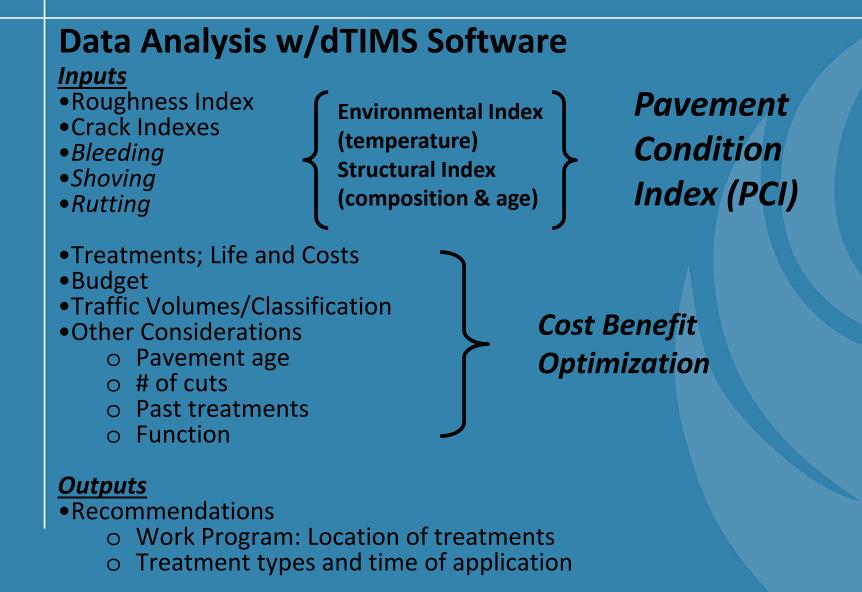

### Pavement Management Van: Automatic Road ANalyzer (ARAN) van

#### **Data Collection with ARAN Van**

- Images of pavement with high resolution cameras to asses pavement condition
- Alternating two-year collection cycles for: major/collector streets (1,350 miles) with 100 % of mileage collected residential streets (3,500 miles) in quarter sections with 30 % collected (assumed "typical")

#### **Recommendations/Treatments - Alternatives**

- Treatment alternatives depend on distresses present
- Treatment year depends on available budgets and efficiency of treatment
- Efficiency of treatment depends on traffic type, volume, lanes of traffic, etc.

#### **Treatment Programs** Major and Collector Streets

- Asphalt Rubber Overlay
- Fractured Aggregate Surface Treatment (reintroduced in 2013)
- Micro Surfacing (reintroduced in 2014)
- Crack Seal

#### **Local Streets**

- Asphalt Rubber Overlay
- Fractured Aggregate
- Slurry Seal
- Fog Seals
- Crack Seal

#### Financial

Annual Budget for FY 2014-2015							
Major Overlay	\$ 9.6 million						
Residential Overlay	\$ 9.4 million						
Program FAST Program	\$ 1.8 million						
Crack Seal	\$ 1.0 million						
Slurry Seal Program	\$ .98 million						
Micro-Surfacing	\$ .50 million						
Total	\$23.28 million						

#### Implementation

- Job Order Contracting for all programs
- Three years with up to two additional years and/or cap on contract amount per JOC
- Overlay has 3 contractors servicing Major/Collector and Residential programs
  - All others have one contractor each

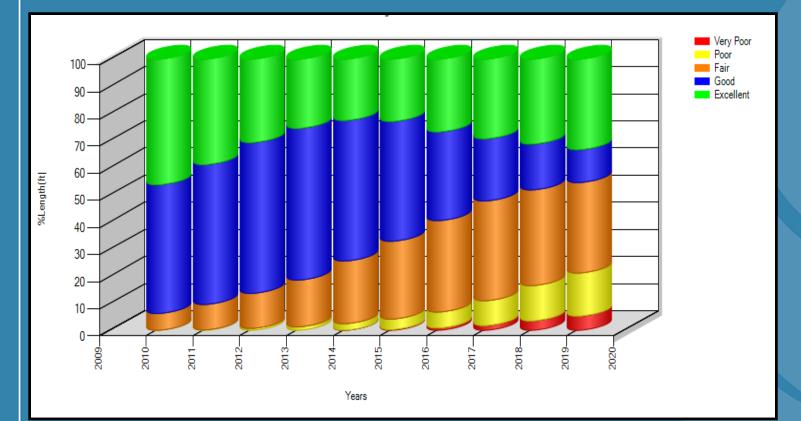

#### **Work Program**

#### **Condition Distribution**

## Benefit of current system

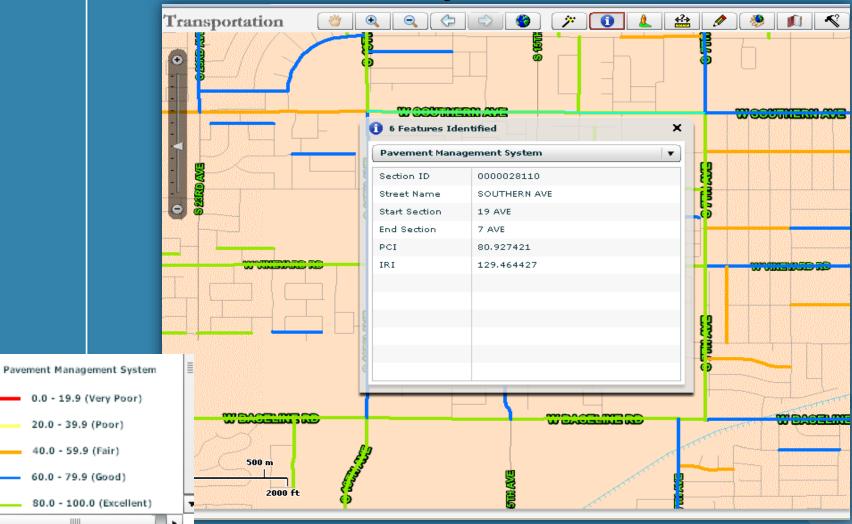

- Improved safety of collection
- Quicker pace
- Subjectivity minimized
- Results are easier to work with
- Offers flexibility with results
- Different budget scenarios analyzed

#### **Benefit of current system**

L e

 $\checkmark$ 

# **Future of Pavement Preservation**

## **Challenges and Goals**

- Calibrate results for practical interpretation
- Acceptance as a tool for effective asset management
- Become fully integrated with preservation programming

# **Future of Pavement Preservation**

## **Benefits of Integrating with Preservation**

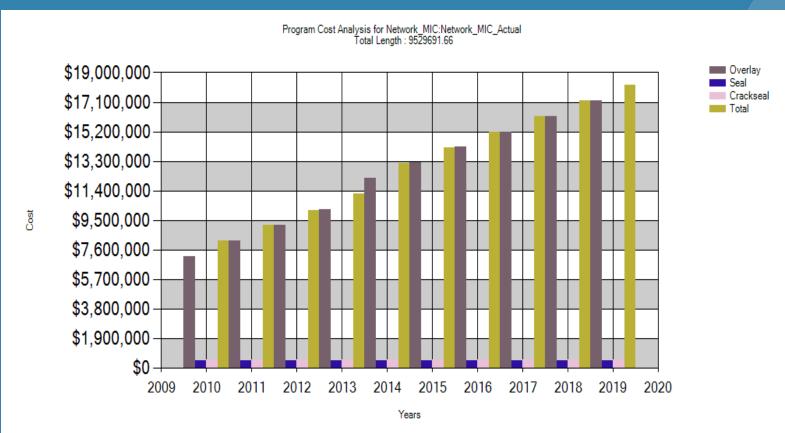

- Engineering based
- Comprehensive analysis of all assets
- Improved sequencing
- Improved quality and pavement life
- Effective system based practices
- Public perception
- Consistency
